

Case Study

Petitcochon Live Music Venue

Owner: Gérald – 082 511 0202

**Corner Rivonia Road & 1st Avenue
Morningside
Johannesburg
Gauteng**

www.petitcochon.co.za

History:

The Owners of this French Bistro, bar and night venue had a noise issue as a result of live music and DJ's. They had to take steps to significantly increase the soundproofing of the venue.

Their glass doors and windows were their main problem. They removed the doors and windows causing the noise problem and replaced it with a Soundproof Dry wall using the following products supplied by Genesis Acoustics:

- Genesis Acoustic Boards
- Green Glue Compound
- Green Glue Sealant
- 50mm thick 60D Acoustic Cavity Insulation

Owner comments:

“We found the product to be very easy to work with. We noticed a significant difference after installation and were happy with the positive effects this product had on the wall – Green Glue does it's job!”
